

Sunshine Grower Grade Green

Grower Grade Green is a short fiber professional peat moss, ideal when an intensely screened, stick-free growing media is required. It is most often used in the golf course construction trade, mushroom production, seed germination, plug production and other greenhouse uses.

Our Western, Central and Eastern bogs all produce Grower Grade Green peat moss, which is available in 3.8, 5.5 and 55.0 cubic foot sizes.

Sunshine Grower Grade Orange

Grower Grade Orange typically is slightly less fibrous than our Eastern Grower Grade White. It is used throughout the greenhouse trade for vegetable and plant production, mushroom production and mixing your own growing media.

Our Eastern and Western bogs produce Grower Grade Orange peat moss and it is available in 3.8, 5.5 and 55.0 cubic foot sizes.

Sunshine Grower Grade White

The most popular of our professional peat moss line, Grower Grade White has a fibrous consistency that improves aeration and increases drainage to promote plant root development. It is used through-out the greenhouse trade for vegetable and plant production, mushroom production and mixing your own growing media. It is widely used from flat production to larger pot and hanging basket production.

Our Western, Central and Eastern bogs all produce Grower Grade White peat moss, which is available in 3.8, 5.5 and 55.0 cubic foot sizes.

Sunshine Grower Grade Blue

Grower Grade Blue (Special Coarse), is our most fibrous professional peat moss. Visually, you will immediately notice that it is a very chunky peat, with a very high air capacity. It is suitable for orchids, azalea & camellia production, ground beds, bulbs, or when a highly porous mix is required for large containers.

Our Eastern, Central and Western Region bogs produce Grower Grade Blue peat moss. It is available in 3.8 and 55.0 cubic foot sizes. This particular grade is available in limited quantities and is sold at a premium.

Canadian Sphagnum Peat Moss

Our select line of Canadian Sphagnum Peat Moss is 100% organic in nature. The high water retention and air holding characteristics make Sunshine Grower Grades ideally suited to the cultivation of most crops and other professional uses. Each of our bogs produces Sphagnum with texture and qualities unique to that bog and region. Because of this, Sunshine offers up to four different Grower Grades.

From harvesting to baling, each step of the process is continually monitored. Both raw materials and finished product are stringently inspected, ensuring the same consistent high performance with every bale. Sunshine — consistent quality more professionals trust!

What Does OMRI Listed Mean?

OMRI, Organic Materials Review Institute, is a nonprofit organization created to provide professional, independent and transparent review of materials and compatible processes allowed to produce, process and handle organic food and fiber. OMRI was created to benefit the organic community and the general public. Its primary mission is to publish and disseminate generic and specific (brand name) lists of materials allowed and prohibited in organic production. OMRI's role is advisory and educational; final decisions regarding certification and regulatory policy reside with other organizations. The OMRI logo assures the product's compliance to OMRI's comprehensive product review process. Think of it as the "Seal of Approval" for organic growers.
