**Benefits:**

A high nitrogen, highly controlled release fertilizer designed for use on golf course fairways and sports fields throughout summer months. Contains 70% controlled release nitrogen from Methylene 75 (methylene urea). Methylene 75 gradually releases nitrogen to turfgrass up to 14-16 weeks. Due to its high controlled release nature 28-3-14 is best used during warmer summer months requiring temperature and microbial activity. Not recommended as a spring starter fertilizer. High level of Methylene 75 results in minimal surge growth and prolong colour response. Application level suggested to not be below 1.0 lbs Nitrogen per 1000 sq.ft. Do not apply to off colour turf, use quicker acting fertilizers if rapid green up is required.

**Application Rates:**
