Benefits:

A high potassium, highly controlled release fertilizer designed for use on golf course fairways and sports fields throughout summer and fall months. Contains 70% controlled release nitrogen from Methylene 75 (methylene urea). Methylene 75 gradually releases nitrogen to turfgrass up to 14-16 weeks. Use of controlled release nitrogen results in minimal surge growth and prolong colour response. High potassium level assists turf in summer heat tolerance, winter cold tolerance plus disease resistance. Late fall / dormant winter applications result in carbohydrate production and storage which creates strong spring regrowth.
