Kerb™ SC Herbicide

GROUP 15 HERBICIDE

KERB SC HERBICIDE IS A SELECTIVE HERBICIDE FOR CONTROL OF WEEDS IN ALFALFA, TREFOIL, ORNAMENTALS, STRAWBERRIES, APPLES, PEARS, LOWBUSH BLUBERRIES, LETTUCE AND ESTABLISHED PASTURES.

AGRICULTURAL

KEEP OUT OF REACH OF CHILDREN

GUARANTEE: Propyzamide 400 g/L Suspension
Contains 1,2-Benzisothiazolin-3-one at 0.02% as a preservative

REGISTRATION NO.: 30264 PEST CONTROL PRODUCTS ACT

NET CONTENTS: 1.1 L - bulk

Dow AgroSciences Canada Inc.
Suite 2100, 450 - 1 Street S.W.
Calgary, Alberta
T2P 5H1
1-800-667-3852

™Trademark of Dow AgroSciences LLC
PRECAUTIONS
KEEP OUT OF REACH OF CHILDREN
DO NOT APPLY BY AIR
Avoid breathing dust and spray mist. Do not take internally. Wear coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves, chemical-resistant footwear plus socks during mixing, loading and application. In addition, wear a chemical-resistant apron when cleaning equipment, mixing or loading.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.

It is recommended that this product not be applied in a way that will contact workers or other persons, either directly or through drift. Only handlers wearing personal protective equipment may be in the area during application.

When applying to more than 75 hectares per day (420 L of product or 168 kg active ingredient), workers must use closed mixing and loading equipment and a closed cab tractor for application. A closed cab is a chemical resistant barrier that completely surrounds the occupant of the cab and prevents contact with the pesticide or treated surfaces outside the cab.

If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., visit CropLife Canada’s web site at www.croplife.ca.

FIRST AID
Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.
If swallowed: Call a poison control centre or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person.
If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment advice.
If inhaled: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control centre or doctor for further treatment advice.
If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice.

TOXICOLOGICAL INFORMATION
No specific antidote. Employ supportive care. Treatment should be based on judgment of the physician in response to reactions of the patient. Treat symptomatically.

AGRICULTURAL CHEMICAL
Do not ship or store with food, feeds, drugs or clothing.

ENVIRONMENTAL HAZARDS
• TOXIC to non-target terrestrial plants. Observe buffer zones specified under DIRECTIONS FOR USE.
• DO NOT apply this product directly to freshwater habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands), estuarine/marine habitats.
• DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.
• The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.
To reduce runoff from treated areas into aquatic habitats, avoid application to areas with a moderate to steep slope, compacted soil, or clay. 

- Avoid application when heavy rain is forecast. 
- Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.

**STORAGE**
Do not store near feed or food stuffs, or fertilizer. Keep from freezing.

**DISPOSAL**

**Recyclable Containers:**
Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1. Triple- or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.
2. Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

**Returnable Containers:**
Do not reuse this container for any purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

**NOTICE TO USER:** This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *Pest Control Products Act* to use this product in any way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

DISPOSAL
Recyclable Containers:
Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1. Triple- or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.
2. Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

Returnable Containers:
Do not reuse this container for any purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

GENERAL INFORMATION
Kerb SC Herbicide is a selective herbicide used to control quackgrass, certain other perennial grasses such as orchardgrass and timothy, and most annual grasses, including wild oats and volunteer wheat. Kerb SC Herbicide also controls chickweed. Dandelion, thistles and other members of the Compositae family are not controlled by Kerb SC Herbicide.

Kerb SC Herbicide is readily absorbed by plants through the root system, translocated upward and distributed into the entire plant. The degree of translocation from leaf absorption is negligible. It can be applied pre-plant incorporated on certain crops, pre-emergence and post-emergence to weeds and all crops. Post-emergence applications to weeds will not control weeds by foliar uptake, but rather by soil uptake once the product moves into the soil.

GENERAL USE PRECAUTIONS
• Effect on soil type: Kerb SC Herbicide is ineffective and not recommended for application pre-emergence to weeds on highly organic peat or muck soils.
• Grazing Restriction: Do not harvest or graze within 90 days after application of 4 L of Kerb SC Herbicide per hectare or for 60 days after rates of less than 4 L per hectare.
• Caution: Do not use on pastures that contain high proportions of timothy, crested wheat grass or meadow Fescue, as severe stand reduction will occur.
• DO NOT apply by air.
• Reduce dosage accordingly for band treatment.

Rotational crops
Observe a plantback interval of 30 days for leafy vegetables (except Brassica vegetables), 90 days for root and tuber vegetables and 360 days for all other crops.
Field sprayer application
DO NOT apply during periods of dead calm. Avoid application of this product when winds are
gusty. DO NOT apply with spray droplets smaller than the American Society of Agricultural
Engineers (ASAE) medium classification. Boom height must be 60 cm or less above the crop or
ground.

Tank Mixtures
For information on tank mixing with any additive, pesticide or fertilizer not specifically
recommended on this label, consult Dow AgroSciences Canada Inc. at 1-800-667-3852 or
www.dowagro.ca. The user assumes all risks and liability in connection with the use of tank mixes
that do not appear on this label or that are not specifically recommended by Dow AgroSciences
Canada Inc.

DIRECTIONS FOR USE
READ ALL DIRECTIONS CAREFULLY BEFORE APPLYING. FAILURE TO FOLLOW LABEL
INSTRUCTIONS MAY RESULT IN ERRATIC WEED CONTROL OR CROP DAMAGE.

When applying to more than 75 hectares per day (420 L of product or 168 kg active ingredient), workers
must use closed mixing and loading equipment and a closed cab tractor for application. A closed cab is a
chemical resistant barrier that completely surrounds the occupant of the cab and prevents contact with
the pesticide or treated surfaces outside the cab.

Mixing Instructions
Mix Kerb SC Herbicide in water and apply uniformly with a standard low pressure herbicide sprayer with
flat fan nozzles at 300-500 litres of water per hectare.

Methods of Application
Kerb SC Herbicide can be either fall or spring applied depending upon the crop involved.

A) Fall application (Alfalfa, Trefoil)
Kerb SC Herbicide should be applied in the fall from late September to early November. Exact timing
depends on soil temperature and ground freezing. Best results are obtained when soil temperature is low
but above freezing and soil moisture is high. Surface applications are most effective if followed by rain in
a day or two or a light overhead irrigation (1.25 to 2.50 cm). Kerb SC Herbicide acts through root
absorption.

Established Pastures: To control foxtail barley (*Hordeum jubatum*) in established grass pastures, or
grass/legume (alfalfa, trefoil) pastures, apply Kerb SC Herbicide in late fall prior to freeze-up. On brown,
dark brown, or gray wooded soils use 1.1 L of Kerb SC Herbicide per hectare. On thin black or black soils
use 1.4 L of Kerb SC Herbicide per hectare. Some of the less tolerant pasture grass species, (e.g. tall
fescue, creeping red fescue) may experience a 10-15% reduction as a result of the treatment.

B) Spring Application
(Seed Alfalfa): Kerb SC Herbicide can be applied in the spring as a surface spray to control annual
grasses, including wild oats. For optimum control the soil temperature should be cool. If soil temperature
is high and moisture content low a light incorporation is recommended.
CROP RECOMMENDATIONS

ALFALFA, TREFOIL (in first year and established plantings)

<table>
<thead>
<tr>
<th>To Control:</th>
<th>Kerb SC Herbicide Per hectare*</th>
<th>Timing</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>Wild Oats</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Quackgrass, orchardgrass,</td>
<td>2.8- 4 L</td>
<td>Fall</td>
</tr>
<tr>
<td>timothy, chickweed</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*Note: Do not use more than 2.8 L per hectare in Spring Application."

Dodder Control in Alfalfa and Trefoil grown for seed

4 L of Kerb SC Herbicide per hectare. Apply in the fall (late September to early November) or early spring (early April to early May); spring application will be effective ONLY if low temperatures prevail and moisture is available following application. Spot treatment of Dodder may be necessary as complete control of Dodder is not achieved with Kerb SC Herbicide.

ORNAMENTALS (Established)

Iris, peony, ground covers (except Vinca minor) and any coniferous trees and shrubs which are tolerant of Kerb SC Herbicide. To control quackgrass, most annual grasses and chickweed in established plantings, apply Kerb SC Herbicide in the fall at the rate 37 mL per 100 square metres. DO NOT USE Kerb SC Herbicide ON OR PERMIT TREATED AREAS TO DRAIN ONTO TURF GRASSES (EXCEPT FOR REMOVAL).

ORNAMENTAL NURSERY STOCK, CONTAINER GROWN (British Columbia only)

To control annual grasses and chickweed during the winter and spring in a sawdust:peat (3:1) medium for container grown coniferous trees and shrubs, apply Kerb SC Herbicide at a rate of 37 mL per 100 square metres in November to February. Do not apply to stock that has been transplanted less than six months.

STRAWBERRIES (Maritimes and British Columbia only)

To control annual grasses and chickweed, apply Kerb SC Herbicide from late September to early November at a rate of 2.8 L per hectare. Best results are obtained when soil temperatures are low but above freezing and when soil moisture is high.

APPLES AND PEARS

To control quackgrass and annual grasses apply Kerb SC Herbicide from late September to early November at a rate of 5.6 L of product per hectare or 56 mL per 100 square metres. Use only under trees established for at least one year. Best results are obtained when soil temperatures are low but above freezing and when soil moisture is high.

LOWBUSH BLUEBERRIES

To control perennial grasses including quackgrass and annual grasses, apply Kerb SC Herbicide from late September to early November at rates of 4.1 - 5.6 L of product per hectare. Best results are obtained when soil temperatures are low but above freezing and when soil moisture is high.

Note: Do not apply Kerb SC Herbicide to the above crops until all the fruits have been harvested.
LETTUCE (Direct seeded or transplanted)
To control germinating annual grasses and some broadleaf weeds, apply Kerb SC Herbicide once a year at 2.75 L of product per hectare. For direct seeded lettuce apply either as preplant incorporation, preemergent or postemergent with a pre-harvest interval of 55 days. For transplanted lettuce apply Kerb SC Herbicide 7-10 days post-transplant.

Note: Do not replant lettuce in the Kerb SC Herbicide treated field in the same year as significant residues may result.

BUFFER ZONES TO PROTECT NON-TARGET SENSITIVE TERRESTRIAL HABITATS
Use of the following spray methods or equipment DO NOT require a buffer zone: hand-held or backpack sprayer and spot treatment.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of non-target sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands).

**Buffer Zone Table**

<table>
<thead>
<tr>
<th>Method of Application</th>
<th>Crop</th>
<th>Buffer Zones (metres) Required for the Protection of: Terrestrial habitat</th>
</tr>
</thead>
<tbody>
<tr>
<td>Field sprayer</td>
<td>Established grass pastures, established grass/legume (alfalfa, trefoil) pastures, alfalfa grown for seed, trefoil grown for seed, strawberries, lettuce, established ornamentals</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>Lowbush blueberries, apples, pears</td>
<td>10</td>
</tr>
</tbody>
</table>

*For field sprayer application, buffer zones can be reduced with the use of drift reducing spray shields. When using a spray boom fitted with a full shield (shroud, curtain) that extends to the crop canopy, the labelled buffer zone can be reduced by 70%. When using a spray boom where individual nozzles are fitted with cone-shaped shields that are no more than 30 cm above the crop canopy, the labelled buffer zone can be reduced by 30%.

RESISTANCE MANAGEMENT RECOMMENDATIONS

For resistance management, Kerb SC Herbicide is a Group 15 herbicide. Any weed population may contain or develop plants naturally resistant to Kerb SC Herbicide and other Group 15 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Other resistance mechanisms that are not linked to site of action, but specific for individual chemicals, such as enhanced metabolism, may also exist. Appropriate resistance-management strategies should be followed.

To delay herbicide resistance:
- Where possible, rotate the use of Kerb SC Herbicide or other Group 15 herbicides with different herbicide groups that control the same weeds in a field.
- Use tank mixtures with herbicides from a different group when such use is permitted.
Herbicide use should be based on an IPM program that includes scouting, historical information related to herbicide use and crop rotation, and considers tillage (or other mechanical), cultural, biological and other chemical control practices.

- Monitor treated weed populations for resistance development.
- Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment and planting clean seed.
- Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.
- For further information or to report suspected resistance, contact Dow AgroSciences Canada Inc. at 1-800-667-3852 or at www.dowagro.ca.
