

## SECONDARY DISPLAY PANEL

**PRECAUTIONS: KEEP OUT OF THE REACH OF CHILDREN, UNAUTHORIZED PERSONNEL, DOMESTIC ANIMALS AND PETS.** May be harmful or fatal if swallowed. Avoid contact with skin, eyes or clothing. Wash hands, after handling and before eating, drinking or smoking. Wash contaminated clothing with soap and hot water before reuse. This product is toxic to fish, birds and other wildlife. Keep out of any body of water.

**FIRST AID:** In case of accidental contact, flush eyes or skin with water and wash contaminated clothing. Seek medical attention IMMEDIATELY if ingested or if breathing difficulty occurs or irritation persists. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

**TOXICOLOGICAL INFORMATION:** TERMINATOR<sup>®</sup> Mouse and Rat Place Pack is not an anticoagulant type of rodenticide. If ingested, limit absorption by either emesis or gastric lavage. Follow immediately with activated charcoal and saline cathartic orally; repeat every 6-8 hours for at least 72 hours. Activated charcoal has been shown to be effective. Animals showing signs of toxicosis should receive supportive therapy-maintain body temperature, respiration and electrolytes. Corticosteroids and osmotic diuretics (mannitol) may be beneficial.

### DIRECTIONS FOR USE:

**SELECTION OF TREATMENT AREAS:** Determine areas where the mice and rats will most likely find and consume the bait. Generally, these areas are along the walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been observed. Remove as much alternative food accessible to rodents as possible. The bait is not to be placed outdoors, in areas near farm wells or water reservoirs, or in areas where there is a possibility of contaminating sources of drinking water.

**BAITING STRATEGY:** Highest bait consumption is expected to occur on the first day or two after treatment. After several days, inspect the tamper-resistant bait stations and replenish bait at sites where there is heavy feeding. Although one night's feeding will usually provide a lethal dose, maintain bait for at least a week to provide all rodents a chance to feed on the bait. Baiting should be continued until all signs of feeding have ceased. Where a continuous source of infestation is present, establish permanent bait stations and replenish bait as needed.

**APPLICATION DIRECTIONS:** Chemical-resistant gloves must be worn while applying this product. TERMINATOR<sup>®</sup> Mouse and Rat Place Pack is a new rodenticide completely unlike anticoagulants. Generally rodents will consume a lethal dose in a single feeding with dead rodents appearing one or two days after they eat the bait. Place directly in tamper-resistant bait stations; do not open place packs.

**NORWAY AND ROOF RATS:** Apply 3-12 place packs per placement. Adjust the amount applied to the level of rat feeding expected at each bait placement. Tamper-resistant bait stations should be spaced at 6.0 to 9.0 meter intervals, in locations out of reach of children, pets, domestic animals and non-target wildlife. The number and location of bait stations should be recorded.

**HOUSE MICE:** Apply 3 place packs per placement. Tamper-resistant bait stations should be spaced at 2.4 to 3.7 meter intervals, in locations out of reach of children, pets, domestic animals and non-target wildlife. The number and location of bait stations should be recorded.

**USE LIMITATIONS:** For control of House Mice (*Mus musculus*), Norway rats and Roof rats (*Rattus norvegicus* and *Rattus rattus*) in homes, industrial and agricultural buildings, food-handling establishments and similar man-made structures. Do not use TERMINATOR<sup>®</sup> Mouse and Rat Place Pack in sewers. Bait must be placed in tamper-resistant bait stations. Tamper-resistant bait stations must have the following characteristics:

- constructed of high-strength material (e.g. metal or injection-moulded plastic) and resistant to destruction by children, non-target animals and, if applicable, heavy industrial machinery (e.g., fork lift).
- entrance designed so that children and non-target animals cannot reach the bait.

- internal structure which prevents bait from being shaken loose.
- access panel which fastens securely and locks (e.g., metal screw lock or padlock).
- capable of being securely fastened to a surface (e.g., nailed down, encased in cement).
- clearly labelled **WARNING POISON**.

These bait stations must be placed in locations out of reach of children, pets, domestic animals and non-target wildlife. A food-handling establishment is an area or place in which food is held, processed, prepared and/or served. In food-handling establishments, place tamper-resistant bait stations on the floor or ground near walls where signs of rodent feeding are apparent. Do not place tamper-resistant bait stations in areas where there is a possibility of contaminating food or surfaces that come in direct contact with food.

- **Non-food areas** of food-handling establishments include garbage rooms, machine rooms, boiler rooms, garages, mop closets, and storage areas for canned, bottled or packaged products. For areas not directly related to food processing: use only in non-food or non-feed areas where feed, food, packaging and handling equipment are never opened nor exposed.
- **Food areas** of food-handling establishments include areas for receiving; serving; storing of dry, cold, frozen or raw foods; packaging, such as canning, bottling, wrapping and boxing; preparing, such as cleaning, slicing, cooking and grinding; edible waste storage; and enclosed processing systems, such as mills and dairies, or those systems used to produce edible oils and syrups. For areas where feed or food is processed, served or stored: use only when plant is not in operation. Remove or cover all food, packing material and utensils before placing bait in stations. Remove all baits and dead rodents before re-use of the plant (processing areas include storage and service).

**STORAGE AND DISPOSAL:** Do not contaminate water, food or feed by storage or disposal.

**STORAGE:** Store in a cool, dry place away from other chemicals. Store product not in use in a secure location inaccessible to children and non-target animals.

**DISPOSAL:** Do not reuse empty container. Dispose of unused or spoiled bait in accordance with local requirements. Follow provincial instructions for any required cleaning of the container prior to its disposal. Make the empty container unsuitable for further use. Dispose of the container in accordance with provincial requirements. For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

**RODENT DISPOSAL:** Dispose of dead rodents in garbage or by burying.

**NOTICE TO USER:** This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

PRINCIPAL DISPLAY PANEL/POUCH

**TERMINATOR<sup>®</sup> Mouse and Rat Place Pack**  
Mouse and Rat Poison for Indoor Rodent Control  
Kills House Mice, Norway Rats and Roof Rats

COMMERCIAL  
FOR LICENSED PEST CONTROL OPERATORS

House Mice, Norway Rats and Roof Rats usually consume a lethal dose in a single day of feeding, but it may take two or more days from time of bait consumption for these rodents to die. Rodents cease feeding after consuming a lethal dose. TERMINATOR<sup>®</sup> Mouse and Rat Place Pack is effective against anticoagulant-resistant mice and rats.
