

A UNIQUE PEST CONTROL CHEMISTRY FOR HIGHER QUALITY YIELDS

Beleaf insecticide offers a unique mode of action, different than any other greenhouse insecticide on the market. Beleaf provides consistent performance on aphids and thrips in greenhouse cucumbers. The unique anti-feeding action of Beleaf provides superior insect control.

Active Ingredient:

The active ingredient in Beleaf is flonicamid, the only insecticide registered on fruit and vegetables in the 9C classification group. Beleaf is not a neonicotinoid.

Crops:

Greenhouse Cucumbers. Also registered on brassica, cucurbits, fruiting, leafy, root, tuberous and corm vegetables, hops, pome and stone fruit, and alfalfa grown for seed.

Greenhouse Cucumber Rate/Timing:

Thrips and Aphids Foliar Applied: Use a rate of 0.3 g Beleaf / L (30 g Beleaf / L). Apply before populations reach economic thresholds or as populations begin to increase but before damaging populations become established. 1 application per crop cycle.

Thrips and Aphids Drip Irrigation or Hand Drench: 12.5 mg Beleaf/plant. See chemigation section on label. Maximum 2 applications per crop cycle with minimum of 7 days between applications.

Pre-Harvest Interval:

0 days PHI

Water Volume:

Foliar- apply in sufficient water to ensure good coverage, up to 1000L /ha, use the maximum volume when foliage is dense.

Drench- Use sufficient water to ensure delivery of product to the roots.

Pack size:

Beleaf is packed in a 6 X 0.68 kg case.

Features and Benefits:

- Aphids and Thrips stop sucking/feeding in 30 minutes. The pest is unable to penetrate the leaf tissue
- Active by contact and ingestion
- Both immature and adult stages are controlled
- Mortality may take 2-5 days
Due to dehydration/starvation
- Residual activity of 2-3 weeks
Dependent on environmental conditions, plant growth, and rate used
- Beleaf has low ecological impact
No groundwater contamination risk
flonicamid is safe on non-target organisms such as beneficials

Beleaf Resulted in an 80% Reduction in Leaf Damage
