

FORAGE, PASTURE GRASS

Gibberellic Acid (GA3) is one of the most widely used agricultural products in the world and has been used as a growth enhancer for nearly 50 years. Gibberellic Acid is an effective and efficient hormone and when used in agriculture.

Grospurt effectively increases grass growth and feed quantity during periods of reduced spring and winter pasture production. A spring application can 'wake up' pasture grasses in the spring and can extend the grazing season at the end of the season. For use in all grass based pasture systems including dairy, beef, equine, sheep and goat operations.

Application of GS-4 to seeds prior to planting will help break dormancy and increase faster and more uniform stand establishment and is used to stimulate dry matter production when cool season soil conditions limit natural pasture growth rates in the late fall and spring.

WHY CHOOSE US

- GROSPURT CANADA is a 100% Canadian owned and operated company manufacturing high quality Gibberellic Acid products (GA3) for sale across Canada.
- GROSPURT products are the highest quality at a 90% minimum guaranteed purity.

OUR PRODUCTS

- GS-4 is the ONLY Gibberellic Acid (GA3) registered in Canada for application on Forage, Pasture and Turf grass.
- Increases pasture production during spring and fall months.
- Increased pasture production means higher carrying capacity and increased profits.
- Increased pasture production reduces the need for supplementary feed.
- Apply 1-3 times every 3-4 weeks 10 ppm (25ml/100L) in the spring when 2.5-5cm of green have emerged V2-V5 stage and again in the autumn months.

'HIGHER QUALITY MEANS BETTER RESULTS'
