

AGROX CD SEED PROTECTANT

THE PRODUCT:

AGROX CD is a ready-to-use drill box insecticide-fungicide seed protectant which contains two active ingredients including diazinon and captan. AGROX CD can be used on seed previously treated with fungicide but should not be used on seed already treated with an insecticide.

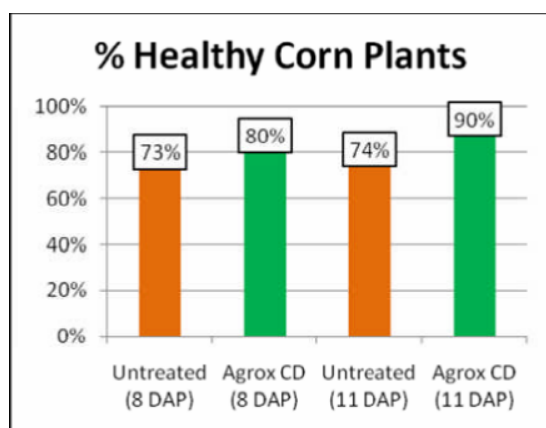

AGROX CD protects corn, beans (all types including Lima, Snap, Field), soybeans, and peas from seed corn maggots, seed rots, seedling blights and damping off. Seed within one month of treatment.

APPLICATION RATE & TIPS:

For dry application: AGROX CD is applied to seed at an application rate of 50 grams/25kg of seed (Use 200 grams per 100kg (4 units of corn seed)). Either pretreat seed in a disposable container or treat seed directly in the planter box or drill.

AGROX CD is formulated with graphite, however if seed flow needs to be improved add Glider G graphite seed lubricant according to label and adjust seeding rates if required. Treated seed may reduce seeding rates.

PRODUCT PERFORMANCE:

In trials on corn, AGROX CD provided excellent insect & disease control providing healthier corn plants compared to untreated seed.
“DAP” = DAYS AFTER PLANTING.

AGROX CD AND AGROX B-2 can both be used for certified seed and for on-farm uses. AGROX products are convenient as dry application products and can be used right up to planting time.
