

# Alleyway Agricultural Mix

- Coastal or Interior
- Prefers irrigated conditions
- Intended for between-row plantings
- *Not for animal feed*

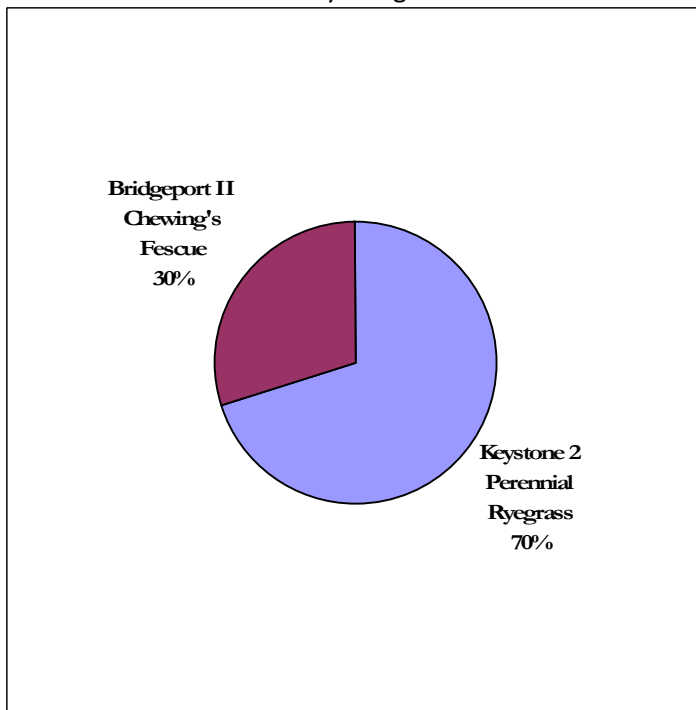

The **Alleyway** seed mixture is a low-growing shade-tolerant mixture designed for soil stabilization and erosion control in between rows of berries, vineyards and orchards.

*This mixture is not intended for forage production and due to the presence of endophyte-enhanced grass species, can be harmful to livestock.*

**Alleyway** should be seeded at 165-250 pounds per acre, depending on seeding conditions and desired growth density.
