

Interior General Revegetation Mix

- Interior
- All purpose
- Adapted to most soil types

For: • *General revegetation*

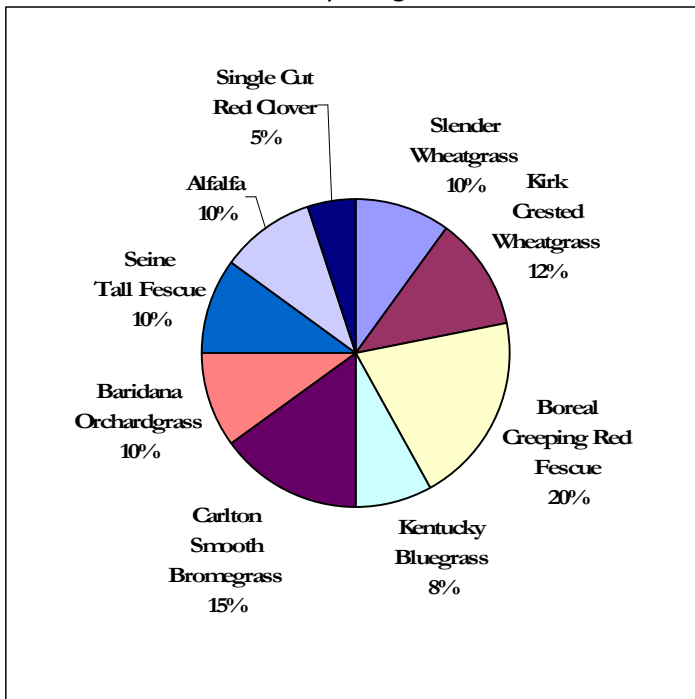

The **Interior General** revegetation mixture is a broad-spectrum mixture suited to the Interior/North-Central regions.

This mixture does well when seeded at altitudes of 0-5000 feet in areas with an average rainfall of 20+ inches.

Interior General should be seeded at 25-100 pounds per acre, depending on seeding conditions and desired growth density.
