

Roadside Revegetation Mix

- Coastal or Interior
- Low maintenance

- For:*
- *General revegetation*
 - *Roadsides and landings*

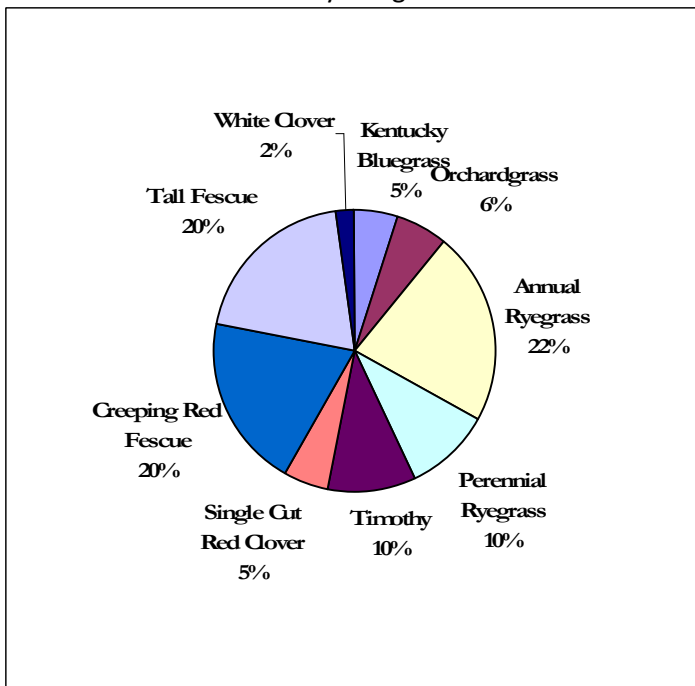

The **Roadside** revegetation mixture is a low maintenance blend of grass and clover for the side of roads or deactivated road areas and landings.

This mixture does well when seeded at altitudes of 0-7000 feet in areas with an average rainfall of 20+ inches.

Roadside should be seeded at 50-100 pounds per acre, depending on seeding conditions and desired growth density.
