

## Premium Roadside Revegetation Mix

- Coastal or Interior
  - Aids with slope stability
- For:*
- *General revegetation*
  - *Sloped roadsides and landings*

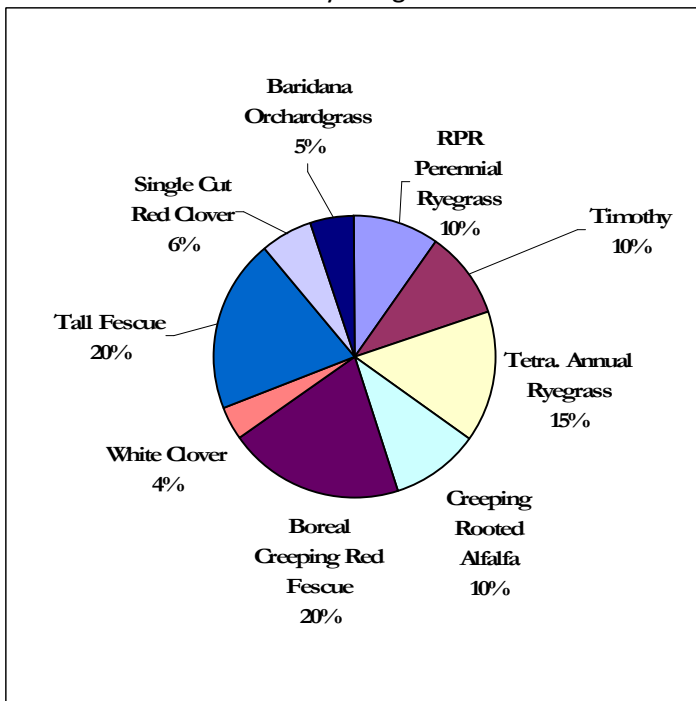

The **Premium Roadside** revegetation mixture contains strongly creeping grass varieties for slope/bank stabilization and a high amount of legumes for soil improvement and sward self sustainment.

This mixture does well when seeded at altitudes of 0-7000 feet in areas with an average rainfall of 20+ inches.

**Premium Roadside** should be seeded at 50-100 pounds per acre, depending on seeding conditions and desired growth density.
