

PRESS RELEASE

Loopex® Registration Approved for Canada

Fredericton, June. 18, 2015: Sylvar Technologies Inc. is proud to announce the registration of Loopex®

- a bioinsecticide based on *Autographa californica nucleopolyhedrovirus (AcNPV)* - for use in greenhouse tomatoes, cucumbers and peppers. Loopex offers highly effective biological control of cabbage looper (*Trichoplusia ni*) larvae. Loopex can be included in any pest control program, especially as an additional resistance management tool for the control of insecticide resistant *T. ni* populations. Due to its high selectivity, Loopex is a safe option for cabbage looper control in production systems using beneficial insects. Loopex is also approved by Atlantic Certified Organic as an input for organic production systems in Canada.
