## Spring

### MOSS CONTROL

- **Dogwood 9-3-6 Moss Control**  
@ 10 lbs / 1,000 sq.ft.

Removing dead moss by dethatching (power raking) is recommended for heavy infestations after applying moss control products. Overseed bare patches if necessary.

### FERTILIZER

A light spring application will strengthen roots and get your lawn off to a healthy start before the heavy growing season. Apply fertilizer as evenly as possible, since uneven applications may result in irregular colouration of your lawn. Using a slow release Nitrogen fertilizer provides your lawn with the nutrients it needs for an extended period of time, while reducing the risk of burning.

- **23-3-23 55% UFLEXX**  
@ 4 lbs/1,000 sq.ft.  
- or -
- **16-32-6 50% UFLEXX**  
@ 6 lbs/1,000 sq.ft.  
- or -
- Organic Option: **Groundskeepers Pride 10-3-3 Organic Fertilizer. OMRI listed**

**N = Nitrogen 1-0-0:** Essential for the vegetative growth of plants so they grow sturdily and mature rapidly, with rich, dark green foliage.

**P = Phosphorus 0-1-0:** Essential for healthy growth, strong roots, fruit and flower development, and greater resistance to disease.

**K = Potassium (Potash) 0-0-1:** Essential for the development of strong roots, helps plants to resist diseases, protects them from the cold and protects during dry weather by preventing excessive water loss.

### LIME

Acidic soils do not allow proper uptake of many important nutrients. Applying lime will raise the pH (more alkaline) to a balanced level, while also adding Calcium and Magnesium. Too much lime however can be just as problematic as not enough. A soil test can recommend the right amount to apply. Dolo-Pril is fast acting lime, in an easy-to-use prill form.

- **Dolo-Pril**  
@ 12 lbs / 1,000 sq.ft.  
- or -
- **Dolo Fine/Coarse**  
@ 25 lbs / 1000 sq ft

Avoid applying fertilizer and lime together as the Nitrogen may be lost back into the air.

Do not apply lime on newly seeded lawns.
